These figures compare reported morbidity for selected communicable diseases during the most current quarter in comparison to the historical morbidities reported in the respective quarter over the previous five years. For example, the total number of cases for chlamydia in 2025 Quarter 2 (Q2) was 523; however, the average of the Q2 totals from the past five years was 572.4. The ratio of the 2025 Q2 total compared to the mean of the Q2 totals from the previous five years is 0.086, which means that the number of cases of chlamydia reported in 2025 Q2, when rounded to the nearest tenth, was 8.6% less than the average number of cases reported during Q2 of the previous five years.
